

Industrial Electrician

Are you highly proficient in your trade, do you pride yourself on delivering quality every time, and would you like to work in a company that never compromises in this regard? Would you like to use your professional qualifications in a production environment with state-of-the-art facilities and equipment, and are you motivated by opportunities for personal development? If the answer to these is 'yes', then read on!

On behalf of Lowenco A/S, against the backdrop of the company's rapid development, TornbjergSchou is now looking for an industrial electrician to form part of a strong team of professionals who build and assemble modular freezer and cold storage systems for some of the world's leading biotech and pharma companies.

Lowenco produces advanced freezer and cold storage solutions for the biotech industry and pharma industry around the world and is now one of the leading producers of cold storage facilities.

Lowenco has devised a strategy for how to change the expensive, inefficient, and non-environmentally-friendly temperature-controlled storage solutions that have tended to be available on the market up to this point. The solutions were developed under the CON20 and LSSU brands, with development of further solutions also underway.

Lowenco's motto, 'creating a better world – one unit at a time', permeates the entire company and everything it does, which is why quality and professionalism go hand in hand in all the company's processes.

Job description

Working under the head of electrical engineering, your role will be to carry out electrical installation of control panels and refrigeration systems at the company's Vamdrup site, as well as installing the completed solutions for customers worldwide.

As you will be acting as an interface in a wider context within the organisation, you will need to have a positive, solution-orientated mindset. Your focus on quality and ongoing optimisation of internal procedures will help to make improvements to the general processes and structures of production as a whole.

As all elements of the complete solutions are subject to stringent quality requirements, it is essential that you never compromise on quality.

Your main work tasks will be as follows:

- Electrical installation of control panels and refrigeration systems
- Testing of installations before commissioning
- I/O testing as part of FAT and SAT
- On-site installation of complete solutions for customers around the world
- Starting up and commissioning systems all over the world

The position involves 40–100 days of travel annually.

Your background

With Lowenco being known for its high technical standards and professionalism, this role will require you to focus on and deliver quality in all aspects of your work.

Your interpersonal skills will need to come to the fore as much as your background as a qualified electrician – ideally with experience in industry – to achieve success in this role.

Expectations:

- You are highly proficient in your trade and take pride in doing things right the first time around
- You are flexible and solution-orientated
- You are a friendly team player who has a positive mindset
- You thrive on taking responsibility and want to make a difference.

Lowenco benefits

Being part of a company that is experiencing rapid growth and works with the latest technologies in the industry. A competitive salary and favourable terms of employment as part of a young and dynamic team, with a real opportunity to influence and shape your working day and future development.

TornbjergSchou aims to fill this vacancy as soon as possible, so no deadline has been set for applications. If you have any questions about the role, please contact Helene Tornbjerg or Frank Schou, who can be reached on +45 40 60 71 00.
